# Assessment

**Part 2: Advanced – OOP, JS, AJAX, Session, File Handling**

**Scenario:**

You're assigned to build a mini HelpDesk system for internal ticketing at AutoFix Pvt. Ltd.

**Tasks:**

| Task Area | Description |
|---|---|
| Ticket Page | Create a ticket submission page using JS validation. |
| Backend Logic | Use PHP OOP to create a Ticket class with ID, title, status, assigned-to, date.<br>Save and retrieve tickets from a JSON file. |
| User Session | Allow login with username/password and manage session. |
| Ticket Display | Show open vs. closed tickets via AJAX without reloading. |

**Key Skills Assessed:**

- PHP OOP & classes
- File handling (JSON or CSV)
- JS + AJAX interactivity
- Sessions and login flow

**Reflective Thinking:**

What are the trade-offs of storing tickets in a file vs a DB?
